COMP396 Weekly Meeting Minutes
(Week 8)

Date & Time: Wednesday, March 18th, 2026, 10:00–12:00

Location: Harold Cohen Library, Upper Ground Floor, Group Study Table

Note Taker: Xue Ella

Attendees: Zhang Olivia (ZO), Zhao Saria (ZS), Xue Ella (XE), Wong Haw (WH)

Note: *As the Easter holiday begins next week, our meeting will be held online. Happy Easter to everyone!*

---

1. Agenda

- Review the supervisor's latest response regarding the final code submission process.
- Conduct the final code review, package the files, and complete the Canvas submission.
- Review the preliminary code for optimization and robustness testing presented by ZS.
- Allocate upcoming report writing tasks and outline the work schedule for the Easter holiday.

2. Discussion & Decisions

2.1 Supervisor Feedback and Final Code Submission

- **Deadline Extension & Naming Convention:** ZS emailed the supervisor prior to submission regarding the issue of filenames automatically changing upon multiple uploads. The supervisor provided a unified response to the class and extended our final submission deadline to Wednesday at 17:00.
- **Outstanding Questions:** The questions we raised last week—including the precise definition and scoring criteria for "taking position," the existence of any secondary scoring metrics besides Activity, PD ratio, and Return, and the exact distinction between "Aggregate PD ratio" and "True PD ratio"—have not received further clarification from the supervisor.
- **Submission Completed:** Given the deadline, we packaged the final code into a zip file, strictly named it submission.zip as required, and successfully uploaded it to Canvas during the meeting.

2.2 Optimization and Robustness Code Review

ZS completed the preliminary scripting for code optimization and robustness testing based on team decisions. During the meeting, we reviewed the core code snippets, which highlighted the following technical implementations:

- **Grid Search Parameter Optimization:** Independent optimization scripts were developed for the three strategy types (optimize_trend_individual.py, optimize_mr_individual.py, and optimize_short_individual.py). The optimization framework utilizes a 7:3 train/test split (700 days for training, 300 days for testing). To ensure strong out-of-sample performance, the evaluation metric is calculated using a composite score: 0.3 * Train Sharpe + 0.3 * Test Sharpe + 0.2 * Test Return + 0.2 * (1 - |Drawdown|/50).
- **Robustness Testing Framework:** We reviewed the robustness_test.py script, which comprehensively covers four core tests: time period split tests (train/validation), parameter sensitivity analysis, rolling window tests, and independent strategy component tests.
- **Stop-Loss Comparison:** The test_atr_stoploss.py script was created to compare our current "signal-driven exits" against a "fixed ATR stop-loss" mechanism (testing 2.0x and 3.5x ATR multipliers) to evaluate differences in portfolio-level performance and maximum

drawdown control.

- **Automated Chart Generation:** ZS wrote the generate_report_figures.py script to automatically generate essential visualizations for the final report, including the asset classification scatter plot and the Return vs. PD Ratio comparison chart for strategy components.

---

3. Task Allocation

For the next two weeks, our primary focus will shift entirely to writing the final report. To accommodate the upcoming Easter holiday, the deadline for all assigned tasks is set to **April 3rd**.

ID	Task Description	Owner	Due Date
G1	**Code Refinement & Chart Generation:** Continue refining the optimization code and use the automated scripts to generate all required data charts for the report.	ZS	Apr 3
G2	**Optimization Report:** Write Section 1.4.2 ("Parameter Search Space") and Section 1.4.3 ("Optimization Results") based on the outputs from the optimized code.	WH	Apr 3
G3	**Robustness Report:** Complete Section 1.5 ("Robustness Testing"), focusing specifically on out-of-sample validation and parameter sensitivity analysis, with technical assistance from ZS.	XE	Apr 3

ID	Task Description	Owner	Due Date
G4	**Test Analysis Report:** Coordinate with ZS and XE to write the "Rolling Window Test" and "Strategy Component Independent Test" sections and complete the comprehensive analysis of the Part 2 data test results.	ZO	Apr 3

---

4. Next Meeting Arrangement

- **Date & Time:** Friday, March 27th, 2026 (Specific time to be confirmed online)
- **Location:** Online (Tencent Meeting / Teams)
- **Key Agenda:**
  - Individual progress reports on tasks G1 through G4.
  - Resolve any issues regarding data and chart integration for the report.
